Freelancer

Ecommerce Web application development using Python Django and hosted on AWS through DevOps lifecycle

Created an ecommerce Web Application for a fashion brand using Python Django framework.

Designed the UX/UI features along with the REST APIs to interact with the web application dynamically.

Setup a branching strategy to isolate the work at various cycles of development lifecycle, i.e. development, testing and production.

Built CI-CD pipeline for all environments using AWS Code Commit, AWS Code Build, AWS Code Deploy and AWS Code Pipeline for continuous deployment.

The deployment to the environments are done after the unit and integration tests are passed through the build phase. Environment related configurations are applied to the application using configuration mapping files stored in an S3 location.

AWS Security features such as SSL binding through ACM and ALB, security groups to restrict the admin access to a set of CIDR.

Pushed application logs to S3 and AWS Cloud Watch for application logging and monitoring.

Static website and content hosting on AWS S3 with CDN

Hosting a static website with high availability using AWS S3 service along with CloudFront (CDN) service and Enable logging. Geo Restrictions to prevent users in France and Australia from accessing the data.

Website development using HTML, CSS, PHP MySQL, JavaScript hosting on Godaddy Server
